

POWER BI MASTERY

From Foundations to Enterprise-Grade Deployment

ENTERPRISE TRAINING CURRICULUM

Power BI • Power Query • Data Modeling • DAX • Visualization
Power BI Service • Security • Performance • Enterprise Deployment

InsightsMastery Academy

PROGRAM COVERAGE

What This Program Covers

FORMAT

**Instructor-Led +
Hands-on Labs**

DURATION

**12 Weeks (Self-Paced
Option Available)**

LEVEL

**Beginner to Enterprise /
Advanced**

DELIVERY MODE

Live Online Batches

CERTIFICATION

**InsightsMastery
Certificate of Completion**

PREREQUISITES

**Basic Excel & Analytical
Reasoning**

Tools & Technologies Covered

Power BI Desktop

Power BI Service

Power Query (M)

DAX

SQL Server

SharePoint

Power Automate

Power Apps

Power BI Premium

Azure ML (Intro)

Who This Program Is For

- ✓ Aspiring & practicing Data Analysts, BI Developers, and Reporting Analysts
- ✓ Excel professionals transitioning into modern Business Intelligence tools
- ✓ IT & data teams responsible for enterprise dashboard delivery and governance
- ✓ Working professionals preparing for Power BI certification or role transition

Learning Outcomes

- ✓ Design and build production-grade Power BI data models from raw sources
- ✓ Write efficient, optimized DAX for real-world analytical scenarios
- ✓ Publish, secure, and govern reports across an enterprise Power BI tenant
- ✓ Deliver a complete, real-world BI solution end-to-end via the capstone project

PROGRAM STRUCTURE

Curriculum at a Glance

Module	Focus	Chapters
Foundations — Basics	Build the strong foundation	8
Advance	Enhance skills, build smarter reports	8
Mastery	Master, optimize & deliver enterprise-grade solutions	7

MODULE 01 — Foundations — Basics

- 01 Introduction to Power BI & the BI Ecosystem
- 02 Power BI Desktop Interface
- 03 Connecting to Data Sources
- 04 Power Query — Data Transformation Basics
- 05 Data Modeling Fundamentals
- 06 Introduction to DAX
- 07 Building Basic Visuals & Reports
- 08 Basic Report Design Principles

MODULE 02 — Advance

- 01 Advanced Power Query & ETL
- 02 Advanced Data Modeling
- 03 Advanced DAX
- 04 Advanced Visualizations
- 05 Interactivity & UX Design
- 06 Row-Level & Object-Level Security
- 07 Power BI Service — Publishing & Collaboration
- 08 Performance Optimization

MODULE 03 — Mastery

- 01 Enterprise Data Modeling
- 02 Advanced DAX Patterns & Optimization
- 03 Power BI & Microsoft Data Platform Integration
- 04 Power BI Premium & Enterprise Deployment
- 05 Governance & Administration
- 06 AI & Advanced Analytics
- 07 Real-World Capstone Project

0
1

MODULE 01

Foundations — Basics

Build the strong foundation

CHAPTER 01

Introduction to Power BI & the BI Ecosystem

- What is Business Intelligence
- Power BI vs. Excel vs. Tableau vs. other BI tools
- Power BI Desktop, Service, Mobile, Report Server — overview
- Licensing tiers (Free, Pro, Premium)
- Power BI architecture & workflow

CHAPTER 02

Power BI Desktop Interface

- Ribbon, panes & views (Report, Data, Model)
- Workspace customization
- File formats (.pbix, .pbit, .pbids)

CHAPTER 03

Connecting to Data Sources

- Excel, CSV, text files
- SQL Server & databases
- Web, SharePoint, cloud sources
- Import vs. DirectQuery vs. Live Connection

CHAPTER 04

Power Query — Data Transformation Basics

- Query Editor interface
- Data types & formatting
- Removing/renaming columns & rows
- Filtering & sorting
- Merge & Append basics
- Data cleaning fundamentals

CHAPTER 05

Data Modeling Fundamentals

- Tables & relationships
- Cardinality types
- Star vs. snowflake schema
- Fact tables vs. dimension tables

CHAPTER 06

Introduction to DAX

- What is DAX
- Calculated columns vs. measures
- DAX syntax basics
- Basic aggregation functions

CHAPTER 07

Building Basic Visuals & Reports

- Chart types (bar, line, pie, etc.)
- Tables & matrix visuals
- Slicers & filters
- Formatting visuals

CHAPTER 08

Basic Report Design Principles

- Report layout & page setup
- Themes & color palettes
- Tooltip basics

0
2

MODULE 02

Advance

Enhance skills, build smarter reports

CHAPTER 01

Advanced Power Query & ETL

- Custom columns with M language basics
- Conditional columns
- Pivot/unpivot
- Parameters & functions in Power Query
- Query folding concept
- Error handling

CHAPTER 02

Advanced Data Modeling

- Many-to-many relationships
- Bi-directional filtering
- Role-playing dimensions
- Composite models
- Calculation groups (intro)

CHAPTER 03

Advanced DAX

- Filter context vs. row context
- CALCULATE function deep dive
- Time intelligence functions
- Iterator functions
- Variables in DAX

CHAPTER 04

Advanced Visualizations

- Custom visuals from AppSource
- Drill-through & drill-down reports
- Bookmarks & buttons
- Conditional formatting
- Report page tooltips

CHAPTER 05

Interactivity & UX Design

- Navigation design
- What-if parameters
- Dynamic titles & measures
- Field parameters

CHAPTER 06

Row-Level & Object-Level Security

- Static RLS
- Dynamic RLS
- Roles management

CHAPTER 07

Power BI Service — Publishing & Collaboration

- Workspaces & Apps
- Dataset refresh scheduling
- On-premises data gateway
- Sharing & permissions

CHAPTER 08

Performance Optimization

- Performance Analyzer
- Reducing model size
- DAX optimization best practices

03

MODULE 03

Mastery

Master, optimize & deliver enterprise-grade solutions

CHAPTER 01**Enterprise Data Modeling**

- Tabular model design at scale
- Composite models & aggregations
- Incremental refresh
- Large dataset handling

CHAPTER 02**Advanced DAX Patterns & Optimization**

- Complex CALCULATE patterns
- Context transition mastery
- Query plans & DAX Studio
- Optimization techniques

CHAPTER 03**Power BI & Microsoft Data Platform Integration**

- Power BI + SQL Server
- Power BI + SharePoint/Excel
- Power BI + Power Automate
- Power BI + Power Apps
- Dataflows

CHAPTER 04**Power BI Premium & Enterprise Deployment**

- Premium capacity management
- Deployment pipelines
- Metadata scanning
- Admin portal & tenant settings

CHAPTER 05**Governance & Administration**

- Governance framework
- Data lineage & impact analysis
- Sensitivity labels & DLP
- Usage monitoring (audit logs, usage metrics)

CHAPTER 06**AI & Advanced Analytics**

- AI visuals (Key Influencers, Decomposition Tree)
- Quick Insights
- Copilot in Power BI
- Azure ML integration (intro)

CHAPTER 07**Real-World Capstone Project**

- End-to-end BI solution design
- Industry use case (manufacturing/retail dashboard)
- Deployment & handover
- Documentation & best practices
